ADVANCED LEAK TESTING MACHINES

## SMART, FAST, PRECISE LEAK TESTS FOR CONSUMER PRODUCTS

Many sub-components and components of consumer products should have sealing properties to ensure the safety of consumers and the functional operation of the products. The leakage of fluids outside or inside the components can pose health risks to consumers. Fluids coming into contact with electronic components of the products can invite electrical hazards. Leak tests for products produced in high quantities should not only have fast cycle times but also maintain accuracy without compromising. Non-destructive testing (NDT) methods, such as leak tests, can be applied to all products coming out of your production line, leaving no room for errors. You can perform leak tests tailored to your production needs using the ADLEMA BT 4000 Series testing devices.
