ADVANCED LEAK TESTING MACHINES

## SMART, FAST, PRECISE LEAK TESTS FOR MEDICAL INDUSTRY

In the medical industry, it is crucial for products to be leak-proof to prevent unwanted fluid ingress, fluid egress, or bacterial contamination, which can have critical implications for patient health. In addition to leak testing, product blockage testing is also an essential quality control method in the industry. Non-destructive testing (NDT) methods, such as leak tests, can be applied to all products that come off your production line, leaving no room for errors. With ADLEMA BT 4000 Series test equipment, you can perform leak and blockage tests according to your production needs.
